PROFESSIONAL SUMMARY

Cloud Data Engineer with hands-on experience in Google BigQuery, relational data modeling, SQL optimization and data quality engineering. Reduced Amazon Athena data scanned by 88.21% through partitioned Parquet datasets; built a telecom pipeline processing 243,553 records, loading 223,966 curated records into BigQuery and quarantining 19,587 invalid records. Experienced in PostgreSQL schema design, AWS, Azure, GCP and Python.

SKILLS

Technical Skills

- Python / SQL
- Google BigQuery
- PostgreSQL
- Apache Spark / Pysparks
- Apache Airflow
- Apache Kafka
- Apache Hadoop
- FastAPI
- AWS / Azure / GCP
- Dagster
- Databricks
- NumPy
- Partitioning / Clustering
- Data transformations
- ETL pipeline design
- JSON data processing
- Prometheus
- Grafana
- Docker
- Flask
- Terraform
- Pandas
- MongoDB
- Amazon Redshift
- Scala
- dbt (Data Build Tool)
- Kubernetes
- Snowflake
- Lambda
- Git / GitHub Actions
- Dimensional modeling fundamentals
- Data lineage concepts
- Data Validation
- Data Quality
- Data Vault
- Data documentation
- Data Modeling
- ETL Pipeline Design
- Stream Processing
- Cloud-Oriented Architecture
- CI/CD
- Datadog
- Query optimization
- Schema designing
- Schema evolution
- Data governance
- Performance benchmark

Core Skills

- System architecture and scalability
- ETL design and orchestration
- Performance optimization and tuning
- SQL performance tuning
- Stream processing and event-driven ingestion
- Architecture trade-offs
- Analytics data modeling and schema design
- Real-time analytics strategy
- Cloud cost optimization and resource management
- CI/CD and reproducible deployments
- Data integration
- Technical documentation
- Cross-functional collaboration
- Agile delivery
- Data quality and validation
- Reproducible workflows
- Cross-team collaboration
- Stakeholder communication

WORK EXPERIENCE

Data Engineer Internship - *Amdari* | May 2026 – Present · London, United Kingdom

- Designed and implemented scalable cloud data pipelines that reduced processing latency by 30% across client environments, using Spark on AWS EMR and Airflow orchestration
- Architect storage and warehousing optimizations that cut infrastructure costs by £10,000 per quarter through partitioning, tiered storage and query optimization
- Optimized database schemas and tuned queries to lower production query latency by 40% via indexing, partition strategies and query refactoring
- Enabled real-time analytics by implementing event-driven ingestion with Kafka and Kinesis, improving time-to-insight for operational dashboards by 3x

Data/Cloud Engineer – *10Alytics* | May 2026 – Oct 2026 · Alberta, Canada

- Increased data processing efficiency by 30% by developing scalable ETL pipelines using Python, SQL, and Apache Airflow, reducing daily pipeline execution time from 10 hours to 7 hours.
- Reduced PostgreSQL query latency by 40% through indexing, partitioning, and schema optimization, cutting average query response time from 5s to 3s.
- Saved £10,000 per quarter in cloud storage costs by redesigning PostgreSQL tables and implementing AWS S3 archival strategies, improving data retention and accessibility.
- Accelerated big data transformations by 60% using Apache Spark (PySpark), processing datasets over 1TB in under 45 minutes, supporting high-volume analytics.
- Implemented automated data validation scripts in Python and SQL, improving data quality scores by 25% and reducing reporting errors.

Lead Data Pipeline Engineer - *Project RISING (10Alytics Global Hackathon 2026)* | Jul 2026 – Present · Remote

- Led design and delivery of ETL pipelines for climate and public health datasets that validated, cleaned and processed 1,690 records for downstream analytics using Python.
- Developed FastAPI-based REST services to expose health intelligence endpoints, reducing data retrieval time for consumers by 60%.
- Contributed scalable system architecture and documentation for cloud-oriented processing workflows, enabling reproducible deployments and stakeholder handover.

EDUCATION

Master Data Engineer (MDe) in Data/Cloud Engineer - *10Alytics* | 2026 (in progress)

PROJECTS

ZIPCO | Financial Risk Intelligence Platform — AWS S3, Athena, Glue, CloudWatch, SQL, Python | GitHub

Built a financial risk analytics pipeline with data validation and release checks; reduced Athena data scanned by 88.21% using partitioned Parquet datasets.

PATIENTRA | Healthcare Data Engineering MVP — Python, SQL, Databricks | GitHub

Developed Bronze–Silver–Gold data workflows for standardized clinical records, cross-hospital patient identity linking and readmission features; added snapshot observability and flagged 8 unresolved identity-review cases for human review.

Telecom Data Revolution — Python, Pandas, Mage, Google BigQuery | GitHub

Built a batch ETL pipeline processing 243,553 telecom records; loaded 223,966 curated records into BigQuery and quarantined 19,587 invalid records with quality issue codes. Implemented partitioned and clustered tables, audit logging, automated tests and GitHub Actions quality checks.

RushMore | PostgreSQL Database Engineering — PostgreSQL, Azure, Python, SQL | GitHub

Designed a relational database schema and ERD for a pizzeria ordering system; generated and validated synthetic data using Python/Faker, Benched SQL queries, evaluated index performance, documented database administration, backup/recovery, and Azure PostgreSQL deployment evidence.
