

Elijah Campbell

Data Engineer

Ottawa, Canada • campbell_salvus@hotmail.com

Professional Summary

Data & Cloud Engineer with hands-on experience designing ETL pipelines, developing RESTful APIs, and building cloud-oriented data solutions using Python, SQL, and FastAPI. Experienced in data ingestion, transformation, validation, backend API development, and technical documentation, with a strong focus on building reliable, scalable, and maintainable data systems. Passionate about cloud-native data platforms, data quality, and modern data engineering practices, with a commitment to continuous learning and delivering solutions that solve real-world problems through collaboration and innovation. Building expertise in cloud technologies, including AWS, Apache Spark, Apache Airflow, Kafka, Snowflake, and Terraform, while expanding practical experience in scalable data platforms and cloud infrastructure.

Core and Technical Skills

Cross-functional collaboration

Technical leadership

System architecture and scalability planning

Performance optimization and tuning strategy

Data modeling and schema design

ETL design and pipeline orchestration

Real-time analytics and stream processing strategy

Cost optimization and resource management

Agile delivery and rapid prototyping

Technical documentation and stakeholder communication

Python

SQL

Apache Spark

Apache Airflow

Apache Kafka

FastAPI

AWS

Google BigQuery

PostgreSQL

Docker

Databricks

Flask

Terraform

AWS EMR

AWS Kinesis

Data Pipelines

Data Validation

Data Quality

Team Collaboration

Work experience

Data Engineer Internship

05/2026 - Present

- Amdari
- Led design and implementation of scalable cloud data pipelines, reducing processing latency by 30% and improving operational efficiency across client environments.
 - Architected data warehousing and storage optimization solutions that cut infrastructure costs by £10,000 per quarter.
 - Optimized database schemas and queries, lowering production query latency by 40% through indexing, partitioning, and tuning strategies.
 - Enabled real-time analytics capabilities using distributed processing and event-driven ingestion, supporting faster business insights.
 - Contributed to technical planning for platform reliability and long-term scalability, producing actionable roadmaps and implementation plans.
 - Collaborated with cross-functional teams to align engineering delivery with client business objectives and operational requirements.

Lead Data Pipeline Engineer – Project RISING

07/2026 - Present

- Project RISING (10Alytics Global Hackathon 2026)
- Designed and implemented ETL pipelines for climate and public health datasets using Python.
 - Developed REST APIs with FastAPI to support health intelligence services.
 - Contributed to scalable cloud-oriented system architecture and data processing workflows.
 - Designed resilient ETL pipelines that validated, cleaned, and processed 1,690 public health and climate records for downstream analytics.
 - Produced technical documentation, API documentation, and architecture diagrams.

Education

Master of Science (MSc) in Data/Cloud Engineer
10Alytics

05/2026 - Present
